

What is happening?

Due to climate change and human activity (agriculture, logging, urban expansion) the number of different species has been declining in certain areas, thus tipping the stability of the ecosystems.

Here are some other ways you can make a change!

Decline of biodiversity

How could this impact us?

Everything revolves around biodiversity. By losing species and genetic diversity, elements of the ecosystems disappear, therefore the whole structure will collapse. If Biodiversity continues to decline we would lose our main sources of food, clean water and oxygen.

Let's save our nature together!
While we still can...

First of all, what is biodiversity?

Biodiversity is the number and types of plants and animals that exist in a particular area or in the world generally.

Just like in this picture here!

What can we do to increase biodiversity?

CREATE WILD
CORNERS

SUPPORT
LOCAL
SPECIES

SPREADING
